## I50B Tracker

Full Featured

GSM/GPRS/IRIDIUM

SATELLITE TRACKING SOLUTION

“G” force accelerometer standard feature.

The i50B Tracker is fully integrated with The [DataGate](#) "back end" IP routing software, allowing complete "end to end" performance with a choice of mapping programs and client workstation software (optional) or direct connection to most Database programs.

The DataGate IP routing software is included free with orders for 50 or more i50B terminals. The i50b TRACKER has ten years of design experience behind it. Available with optional Iridium SBD Satellite modem and/or GSM GPRS quad band modem for world wide operation. Can be ordered as a complete end to end ready to run solution, including back-end software, or as an OEM circuit board assembly with firmware for installation for 3rd Party enclosures!

## The DLS TT-30 is a GPS real-time tracking device with internal quad band GSM-GPRS modem, 850/900/1800/1900 Mhz,

Every GPS tracking device, even the "top of the line" units such as the TT-30 is only as good as the Software that controls and monitors the unit. When a unit with as many features as the TT-30 is integrated with Datalink System's DataNET "back end" software the combination is unbeatable!

Unlike most GPS systems which are based on a central ASP server, DataNET Software is client/server based, which means it can be installed in any server anywhere in the world.

**TT-30**

### REPORTING FEATURES:

- Real-Time GPS Position Request
- Real-Time Movement Intelligence
- Real-Time Non-Movement Intelligent Timed Reporting
- Real-Time Fixed Time Reporting
